All of our windows and doors are custom-made and perfectly designed to enhance your extension, renovation or traditional newbuild. If you're looking to restore your period home to its former glory, there is a variety of authentic design options to

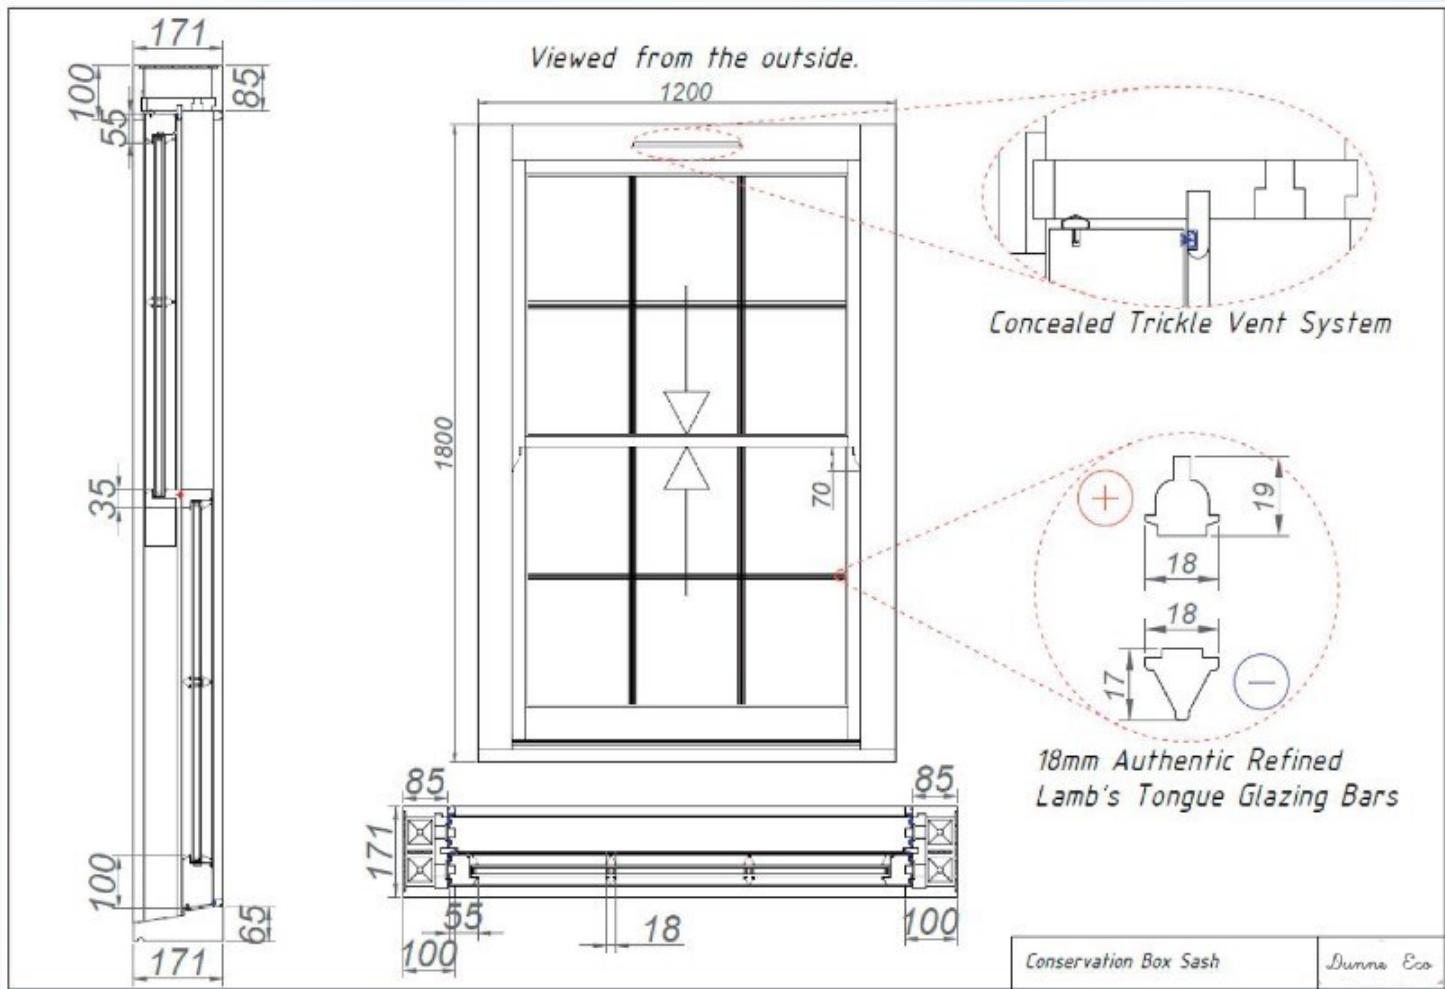

Timber Sash Window Horns Beautifully Crafted Glazing Bars

Box Sash Timber Windows

Since their inception in the 17th century, box sash timber windows have consistently been one of the most sought-after sash window styles, and are particularly popular in homes within conservation areas. Their fascinating history dates back to the Great Fire of London, when innovators of the time realised that fitting the box to a four inch recess of the external wall would reduce the risk of spreading fire. In addition to these practical advantages, masking 80% of the box behind the wall also gave the timber sash windows an understated elegance which quickly proved popular among designers of the period. Balanced on lead weights, our replacement wooden box sashes are completely made to measure. The sashes themselves are either hung on nylon cords or smooth-running chains, whichever you prefer. Choose from a 27 bespoke specification upgrades to enhance any feature of your exquisite timber sash windows, including your desired pulley wheel style or sash horn design.

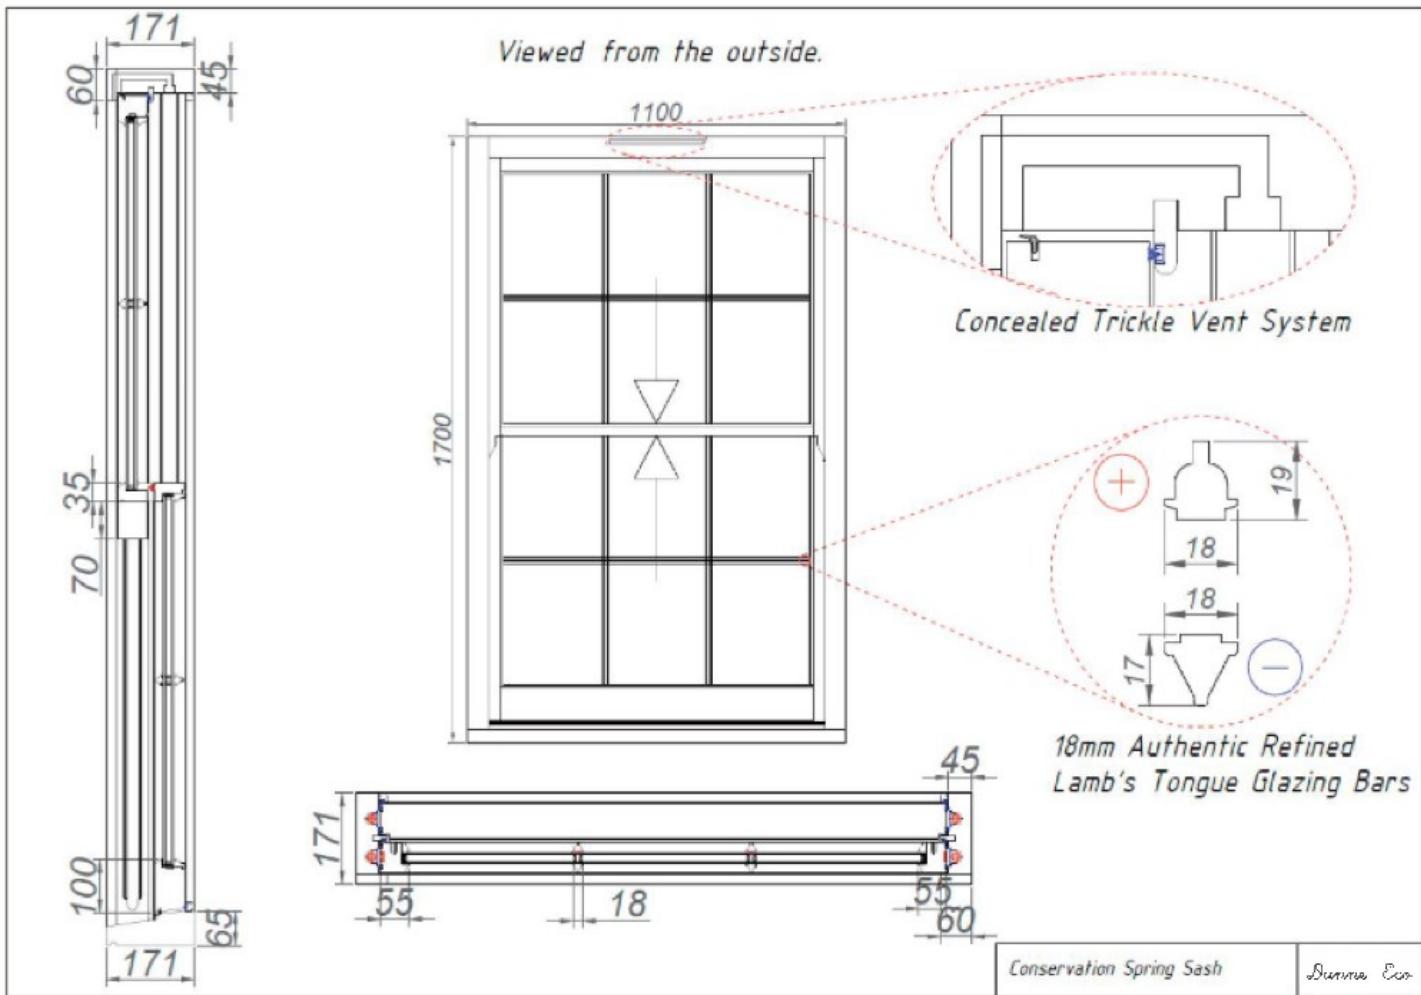

Conservation Box Sash

Spring Sash Timber Windows

Late in the 20th century, the glazing industry welcomed a new product: the spiral balanced sash window, otherwise known as the spring sash timber window. This new design was able to be fitted directly into the structural aperture. While this was a viable advantage, some felt that the visible sash springs also cheapened the charm of the original timber sash windows. Fast-forward a hundred years or so, and Dunne Eco Timber Windows' innovative carpenters have created a new option: an exclusive spring sash timber window with 'hidden' springs, thereby maintaining the character of the traditional sash window. This state-of-the-art spring sash wooden window retains both the slim glazing bars of the box sash window and boasts a finer sash window box. Our innovative spring sash timber window has proven incredibly popular among new-build and extension projects, where the slimmer box can be fitted directly into the structural opening.
